Essay assignment for the Department of Drama, Theatre and Dance

This is a 1500-2000 word essay that critically explores a theatre production and one selected review. Student are assessed on their ability to:

- Offer a thoughtful response to the theatre production and the review they have selected (relevance; argument; knowledge).
- Develop a clear and coherent structure for their ideas (relevance; argument);
- Develop, defend and sustain an argument or critical position that is responsive to the performance (relevance);
- Ensure rigorous citation, proofreading and referencing wherever appropriate (presentation; referencing).

MARKER'S COMMENTS

This is an excellent essay, clearly argued with supporting evidence strategically deployed. A few points to consider:

- p.4 the sentence at the top, continuing on from .3, is overloaded with subordinate clauses
- 'less cruel' I'm not sure about this – I've seen plenty of productions where Prospero is not cruel.
- Forgotten to – forgotten for would work better
- p.5 use the notation 2.2. and 3.2. instead of wasting words on 'act' and 'scene'
- 'too often' I am really unconvinced by the 'too often' here – have you read a performance history of the play?
- Slave narratives – now this really HAS been a feature of productions of the last 40 years – perhaps Doran was trying to buck what is a real trend in recent productions?
- Check you are not confusing the play and production.
- Try to avoid using the word 'Bard' in relation to Shakespeare as it is a very loaded, and not an analytical term
- Suspension of disbelief – I have never bought this idea myself – I don't suspend my disbelief in the theatre, I agree to play.

Analyse the 'live' broadcast of the 2016 RSC Tempest directed by Gregory Doran indicating to what extent you agree with ONE of the following reviews:

Henry Hitchings, Evening Standard 18 November 2016
Michael Billington, The Guardian 18 November 2016

Peter Kirwan, The Bardathon 11 January 2017
Alice Saville, Time Out 7 July 2017
Peter Ormerod, Warwickshire World, 18 November 2016

You may refer to other reviews if this will help your argument.

CeDAS COMMENTS

Doran's 2016 experimental yet gimmicky high-tech RSC revival of *The Tempest* received mixed reviews as it left many audience members disoriented by the dissonance between the high-brow theatrics expected from leading Shakespeare companies and the use of all-encompassing and, at times, suffocating digital effects. In his review for *The Evening Standard,* Henry Hitchings' opinion resonates with the more conservative readership suggesting that it is "rough magic… [that] makes [theatre] so enduring [as] an artform"[1] opposed to Doran's flashy tech additions in this particular adaptation. Though there is a certain draw to the innovative spectacle developed by Intel, Imaginarium Studios, and the Royal Shakespeare Company- with it displaying perhaps a look into the future possibilities and capabilities of theatre practice- it is clear that, especially in retrospect, the overpowering and, in places, glitchy motion capture sometimes misses the mark, often detracting and upstaging the 'magic' created by such a wonderfully talented cast.

The writer establishes her argument – digital effects upstage what critic Hitchings calls the 'rough magic' of theatre.

Hitchings, like many of his fellow critics, begins his piece by tackling the subject of one of the biggest selling points of the show- Ariel's motion capture double. In the promotional works for the show, Doran himself boasts the two-year development[2] of this particular effect, which is reflected by Hitchings' focus on the complexity of what he dubs as "cyber-thespianism."[3] However, despite initially acknowledging and outlining how the effect is created, Hitchings fails to actually describe the overall effect it has on the audience. Here, I am more inclined to draw upon the compelling arguments set out by Peter Ormerod's review in *Warwickshire World.* Ormerod recognises the "flashiness and cleverness"[4] of the projection work but discusses how it inevitably outshines the core of the production, the cast members. Personally, my experience reflects this as, despite Mark Quartley's captivatingly ethereal physicality, less can be said for the lack lustre disembodied double that, though somewhat successfully employed to create a vast array of shapeshifting spiritual forms for Ariel, does so in a disconcerting manner with motion caption errors sometimes

This topic sentence sets out the paragraph focus: discussion of Ariel's 'motion capture double'.

Having discussed two reviews, the writer outlines her own response to the motion capture effect.

resulting in limbs disappearing mid-scene[5]. However, my critical opinion could easily be due to the fact I engaged with the show in a digital format over five years after its initial run, thus significantly changing my viewing experience compared to that of the intended live audience as I am provided with a more detailed and close perspective to notice minor mistakes that may have gone unnoticed on the night. On the other hand, the technical spectacle was not a complete loss as there were particularly effective moments that were created visually through the use of projection, a personal favourite being the haunting bodies of the drowning Italians in the eponymous storm from the opening scene.[6]

Another aspect of impressive staging that Hitchings identifies in his review is Stephen Brimson Lewis' design work for the largescale barebones of a wrecked ship in which the play takes place. Hitchings' praise of the "traditional virtues"[7] of the set design is an example of how the impact of the physical triumphs over the digital time and time again in a performance largely created and remembered for its heavily technical pioneer-work. The unmoving and unchanging boat towering over the performers allowed forbidding spots and levels that hark back to the columns and balconies present within the traditional playhouse stage structure the play was initially made to be performed on. This constant and solidly physical set piece in a play that functions mostly on illusion has a lasting impact on an audience member as it is arguably one of the most memorable visual elements of the show. Though the contrasting sandy beach tones and campy dizzying colours of the costumes, which significantly draw much inspiration from various historical garments associated with imperialistic pasts, create a clear differentiation between the foreign, the local, the mortal and the supernatural, it is the surprising versatility of the framing set-piece that Hitchings, unlike other reviewers who were too distracted by the digital spectacle, rightfully commends as the "heart"[8] of the show. Another crucial element of Doran's production is the casting choice of Simon Russell Beale as a less cruel and more sympathetic iteration of Prospero. Though the review in T*he Evening Standard* touches on Beale's role within the show, I believe it downplays the extent of the excellence of his performance and its inevitable eclipse by the addition of busy technical elements. It is clear that Beale's performance is a tour de force, with Hitchings noting its "dry but moving"[9] nature. Though this 'dryness' could be an active choice from Doran and Beale to create an understated and effortlessly genuine Prospero, the strange juxtaposition that comes from the actor's "eloquence [that] asserts itself" [10] fighting against over-hyped digital interventions, overshadows a performance where, in other contexts,

This topic sentence signposts a new point for discussion: set design.

Although grammatically complex (two subordinate clauses), this eloquently expressed sentence manages to keep the reader on board. However, there are one or two passages in this essay where over-complex, lengthy sentences risk reader strain.

[5] For example, in Act 3 Scene 3 Quartly's corporeal leg is hidden behind the shipwreck set piece resulting in occasional disappearance of his larger birdlike harpy counterpart's right leg see *The Tempest* directed by Gregory Doran, 2016, *Digital Theatre+,* 1:15:14-1:18:22
[6]Doran's *The Tempest* 0:03:15-0:03:32

[8] Hitchings p.1307
[9] Ibid.
[10] Ibid.

Beale would hold utter command. Billington's *Guardian* review summarises this best by discussing how the humanity created by Beale's performance could have been effectively "overshadowed."[11] Although Billington believes Beale to not be a victim of technological upstaging, I still feel that part of his acting prowess is lost on a distracted audience who do not get to fully appreciate the sheer gravitas the actor is more than capable of producing with no help from digital interference.

The writer clarifies her position in relation to veteran critic, Michael Billington. Here - as elsewhere - we have a strong sense of the writer's voice. In this case, she makes it clear she disagrees with Billington.

Likewise, it can be argued that the rest of the cast suffer much the same way as Beale with seemingly one notable exception. As recognised by numerous other critics, Hitchings also comments on the comedic departure from the more human and moral moments Doran seemingly strived to create that came with the presence of Simon Trinder's Trinculo, Tony Jayawardena's Stephano and Joe Dixon's Caliban. Returning to an increasingly minimal and simplistic form of physical humour, the scenes revolving around the clown, the drunkard and the slave can seem a little slow in comparison to the grandiose spectacle of other scenes but are a welcome respite in act two scene two and act three scene two. With just a gaberdine, a fish and a pitcher of wine, the trio are able to captivate the audience as well as an overcrowded stage illuminated with various projections. Hitchings particularly praises Joe Dixon's portrayal as a particularly "tender"[12] Caliban, which I agree is a very humanising touch to a character that too often is presented as a naive island savage rather than a victim of slavery, trickery, manipulation and abuse throughout. However, I do believe it is particularly important to point towards more progressive reviews such as Alice Saville's in *TimeOut* who points out the problematic implications and undertones of slave narratives that go almost unacknowledged by Doran who practically shies away from presenting the harsh reality of slavery that contemporary audiences expect.[13] Despite this issue, the stripped back and simplistic nature of the trio's scenes, which could have easily become forgettable due to the significant tonal shift that nearly does not fit with the rest of the play, works so well because they allow for the actor's talents to really shine through and finally take centre stage.

This passage builds quite nuanced argument by referencing Hitchings first (the tender portrayal of Caliban) and then Saville (issues with slave narratives). This leads onto the writer's own clearly stated evaluation in the final sentence.

The meditation Hitchings closes his article with is particularly thought-provoking as he muses on the "rough magic" that can only be created solely by the theatre. Shakespeare was indeed able to convey the fantastical world of *The Tempest* in his own time, far removed from constantly improving technical elements developing in the 21st century. Both Billington and Ormerod echo similar opinions in their pieces, with the latter stating how the cutting-edge "lavishness… [comes] at the expense of the discipline"[14] thus losing something integral to the physical bodily or imaginative elements of performance. By overapplying effects for the sake

[14] Ormerod

of visual spectacle, Doran takes away the audience's opportunity to enjoy the creative illusionary skills of live performing bodies, by forcing blunt and blatantly artificial effects that inevitably suffocate the living performances that have to battle against unconvincingly monstrous dogs and ten-foot bird spirits. Despite this, like Billington, I do appreciate Doran's experiment into the digital capabilities of the art of theatre as the technological boundaries pushed by the RSC's 2016 production of *The Tempest*, though perhaps demonstrating it to smothering extremes, has allowed for further playful experimentation within the discipline while also making us appreciate the power and magic of live actors.

Overall, Hitchings' review in *The Evening Standard* partially demonstrates the extent of Doran's hits and misses with his spectacular production marking the quadricentennial anniversary of the Bard's death. Despite Doran's intention being to "match Shakespeare's imagination,"[15] it is clear that critics such as Hitchings found that the piece had fallen short. Personally, I believe this may be because the magic of performance lies with its ability to lend itself to the suspension of disbelief. As audience members, we have been trained to embrace the suspension of disbelief in the theatre, imagination becomes key for all participants on and off stage. A director does not necessarily have to sacrifice the imagination to achieve illusions. However, by literally recreating every element of illusion through artificial means, Doran ends up distancing his production from the magic he is trying to replicate, undermining the existing power of the stage and actors.

The writer concludes by exploring the wider implications of the discussion – how theatre is reliant on imagination to achieve illusions.
